

Dear Earl.

I have been in Greece for few days and just got a telegrame from the Iolas gallery asking to contact you and send you the number of V. of the sculptor. I hope really you can do some-thing that will be very exiting pity you did not come to Paris. But any-way. Here a small plan of the sculptor with the explanation of V.

But to work the sculptor need 110V which they go with the fine wires into the TRANSFORMATOR and come out only 2.V. if you need the 110V. Then you can take the current from near the T. (section) BEFORE the current comes out. □□□.

I hope my letter will be a help yours TAKI'S.
